Don't click *remind me later*!

Software updates on your computer, phone, and other devices can seem inconvenient, but they are helpful and keep you safe. Updates often include:

- Patches to flaws found in their programming
- Security improvements to fend off new threats
- New features, including security features (like VPNs and password managers)

IF YOU'RE ALERTED THAT A NEW UPDATE IS AVAILABLE, LET'S UPDATE RIGHT NOW.

- It usually only requires a few minutes
- Your browser tabs will reload (usually)!
- It's one of the easiest ways to stay safe online

Even if you have automatic software turned on, it's worth checking periodically for the latest updates.

If a restart is required, let's restart. Your workplace will understand and appreciate your commitment to security, and you deserve the latest protection for your personal devices.
